

BRAdmin Professional 4 is a device management solution for network-connected devices. This management tool collects information and shows the status and activity of all networked devices via a single console. It allows for mass distribution of device configurations, security settings, firmware updates, and task automation through one central location.

BRAdmin Professional 4 offers the following capabilities and benefits:

Devices View

Main management screen to allow easy assessment of all devices. The view is customizable and can be installed on more than one PC to share administration tasks.

Smart Filters and Groups

Dynamic filters that place devices into different groups. Simplify monitoring and management, and filter by model name, serial number, contact, and other criteria.

Settings

Device configurations that allow administrators to automate pushing preferred device settings to one or multiple machines.

Master Settings and Autoconfiguration: Configure specific device settings for policy compliance

Master Settings are preferred settings that administrators can apply to devices:

- Updating device firmware automatically
- Sending settings files to devices

• **Frequency:** Run on daily or weekly schedule

Autoconfiguration

- Automatic configuration for devices that don't meet a set criteria
- Applying specified settings via BRAdmin Professional 4 once the device is discovered

• **Frequency:** Monitor devices daily, weekly, monthly, or in a specified time period, e.g. every "X" hours

Features	Master Settings	Autoconfiguration
Change device password	✓	✓
Send configuration files	✓	✓
Firmware auto update	✓	✓
Configure Value Added Solutions	✓	✓
Activate Value Added Solutions		✓
Set trigger to send settings file ¹		✓
Apply various settings ²		✓
Monitor target devices		✓
Set device password to company policy without current password		✓

¹ Uses trigger when device discovery is run.

² Settings can be applied using smart filter, groups, profiles, serial number, model name, node name, MAC address, and IP address.

Choose **Autoconfiguration** to detect new devices on the network and automatically push the desired security configuration.

Configure the following using BRAdmin Professional 4:

Device settings

Email alerts

Reports

Firmware updates

Value Added Solutions activation

» Enforces fleet security by automating device discovery

» Implements security configurations to devices that don't meet corporate security requirements

Devices View offers the capability to instantly monitor page counts and supply levels

- Easy reference user interface with access to common tasks
- Color-coded device status
- Toner and ink volume levels

Tasks View allows IT administrators to quickly identify any errors, helping to support faster issue resolution

- View the status of scheduled and one-off tasks
- Quickly identify issues or failures
- View active tasks and logs for **Notification Alerts, Master Settings, and Autoconfiguration**
